

ENDPOINT PROTECTION ADVANCED

ENJOY SAFER TECHNOLOGY®

Whether your business is just starting or established, there are a few things you expect from security software you use daily.

At ESET, we feel that running security software in the business environment should be easy and simple. That's why we have created ESET Business Solutions, a perfect match for any size business—by utilizing more than 25 years of experience as antivirus industry pioneers.

Simple and straightforward

With ESET Business Solutions you can mix and match endpoint protection according to your actual needs, deploying it on a range of platforms (Windows, Mac, and Linux) and devices: computers, smartphones, tablets, and servers.

Light on your system

Our solutions are built with a light footprint, which also makes them suitable for older hardware, saving IT-related costs on hardware upgrades. In addition, program updates are small and can download from a central mirror server.

Easy to manage

Easily deploy, configure and manage your security software from a single console. Our remote management console streamlines IT tasks while allowing you to tweak security settings company-wide.

ESET ENDPOINT PROTECTION STANDARD

ESET ENDPOINT PROTECTION ADVANCED

ESET SECURE BUSINESS

ESET SECURE ENTERPRISE

ESET Endpoint Protection Standard

Keep your network clean and protect your endpoints (computers, smartphones, tablets, and fileservers) against emerging threats. ESET Endpoint Protection Standard provides essential protection for the company network that is easily manageable from a single console.

ESET Endpoint Protection Advanced

In addition to ESET Endpoint Protection Standard, the Advanced version comes with web control, firewall and anti-spam filter to provide additional layers of protection for the company network and your mobile workforce.

ESET Secure Business

Eliminating email-borne threats at the server level, ESET Secure Business gives your company's data an extra level of security that complements the protection of computers, mobile devices and fileservers.

ESET Secure Enterprise

Choose this option if you operate your own internet gateway server to safeguard your HTTP and FTP communications. In addition, ESET Secure Enterprise gives you all the products and tools for the maximum level of protection on your endpoints and servers across multiple platforms.

ENDPOINT PROTECTION ADVANCED

ESET Endpoint Antivirus

ESET NOD32 Antivirus Business Edition for Mac OS X

ESET NOD32 Antivirus Business Edition for Linux Desktop

ESET Endpoint Security for Android
ESET Mobile Security Business Edition

ESET File Security for Microsoft Windows Server
ESET File Security for Microsoft Windows Server Core
ESET File Security for Linux / BSD / Solaris

ESET Endpoint Security

ESET Remote Administrator

See the following page(s) for benefits and features of the products that are color-coded in gray.

Product features may vary depending on operating system. Please consult the individual product pages at www.eset.com for specific product features.

Antivirus and antispware

Eliminates all forms of threats, including viruses, rootkits, worms and spyware, keeping your network protected online and off. ESET's cloud-powered reputation database increases scanning speed and minimizes false positives.

Host-based intrusion prevention system (HIPS)

Provides tamper protection and secures the system registry, processes, applications and files from unauthorized modification. You can customize the behavior of the system down to every last detail and detect even unknown threats based on suspicious behavior.

Device control

Lets you block unauthorized media and devices based on pre-set rules and parameters. Set access permissions (read/write, read, block) for individual media, devices, users and groups.

Auto-scan of removable media

Automatically scans USBs, CDs, and DVDs for threats upon insertion to eliminate autorun and other removable risks. Choose from these scanning options: start automatically/notify (prompt user)/do not scan.

Cross-platform protection

Exchange files and email attachments among Windows, Mac and Linux endpoints with confidence that malware targeting any of these platforms will be automatically detected and eliminated. Prevent Macs from turning into carriers of malware in the company network.

Low system demands

Leaves more system resources for programs you use daily. Our software also runs smoothly on older hardware, saving you the time and costs of having to upgrade your endpoints.

Multiple log formats

Save logs in common formats—CSV, plain text, or Windows event log for immediate analysis or harvesting. Take advantage of data being readable by 3rd party SIEM tools; RSA enVision is supported directly via a plug-in.

Update rollback

Revert virus detection and module updates to a known good state in cases of system incompatibilities. Opt to freeze updates temporarily or until manually changed.

ESET Remote Administrator

See the following page(s) for benefits and features of the products that are color-coded in gray.

Product features may vary depending on operating system. Please consult the individual product pages at www.eset.com for specific product features.

Remote lock	Locks lost or stolen devices by a remote SMS command. After locking, no unauthorized person will be able to access data stored on the device.
Remote wipe	Safely deletes all contacts, messages and data on removable memory cards. Advanced cleaning procedures ensure that it is impossible to restore wiped data (Android 2.2 and higher).
GPS localization	Remotely locates the phone using a remote SMS command and tracks the phone's GPS coordinates.
SIM matching	Stay in control of your company smartphones remotely, even when an unauthorized SIM card is inserted. The admin contacts' phone numbers will receive a wealth of information about the inserted SIM, including the phone number, IMSI and IMEI codes.
Admin contacts	Set up one or more admin contacts for your company mobile fleet to receive all the important information in the event of a loss or theft.
Call Bblocking	Blocks calls from unknown or hidden numbers and also calls to unwanted numbers. Define a list of allowed/blocked contacts and keep your phone bills under control.
Uninstall protection	One password controls it all. Only authorized persons will be able to uninstall ESET Endpoint Security for Android (version 2.2 and higher).
SMS/MMS antispam	Filters out unwanted SMS/MMS messages. Allows you to define custom blacklists/whitelists or simply block all unknown numbers.
Real-time protection	Protects all applications, files and memory cards with ESET NOD32 proactive technology optimized for mobile platforms.
Security audit	An on-demand security audit checks the status of all vital phone functions, including battery level, Bluetooth status, home network, disk space and running processes.
On-access scanning	Advanced scanning protects company smartphones and tablets from threats attempting to access the system via Bluetooth or Wi-Fi.
On-demand Scanning	On-demand scanning provides reliable scanning and cleaning of integrated memory and exchangeable media. Scanning of specific folders is also supported.
Remote administration	Enables you to check the security status of your smartphone fleet, run on-demand scans, push security policies and set uninstall password. Get overview of the platforms, OS versions and other information and stay up to date on your smartphones' security.
Administrator message	Allows administrator to push a message to the device with custom text via ESET Remote Administrator. The message priority can be set to normal, warning or critical warning.

ESET Endpoint Security

ESET Remote Administrator

See the following page(s) for benefits and features of the products that are color-coded in gray.

Product features may vary depending on operating system. Please consult the individual product pages at www.eset.com for specific product features.

Antivirus and antispware

Eliminates all types of threats including viruses, rootkits, worms and spyware.
Provides real-time on-access scanning of the server-stored data.
ESET self-defense prevents malware and unauthorized users from disabling the security of the system.
Powered by advanced ThreatSense® technology combining speed, accuracy and minimal system impact.

Cross-platform protection

Eliminates malware targeting all platforms, including Windows, Mac and Linux operating systems.
Prevents malware from spreading from one platform to another.

Low system demands

Delivers proven protection while leaving more system resources for the server's vital tasks.

Smooth operation

Identification of user accounts used in infiltration attempts.
Password protected uninstallation.
Automatically excludes critical server files.
Automatically detects server roles to exclude critical server files like data stores and paging files from on-access scanning to decrease overhead.

ESET Remote Administrator

See the following page(s) for benefits and features of the products that are color-coded in gray.

Product features may vary depending on operating system. Please consult the individual product pages at www.eset.com for specific product features.

Antivirus and antispyware

Eliminates all forms of threats, including viruses, rootkits, worms and spyware, keeping your network protected online and off. Optional cloud-powered scanning utilizes our reputation database for increased scanning speed and minimal false positives.

Host-based intrusion prevention system (HIPS)

Provides tampering protection and protects the system registry, processes, applications and files from unauthorized modification. You can customize the behavior of the system down to every last detail and detect even unknown threats based on suspicious behavior.

Web control

Allows you to limit access to selected website categories using automatic in-the-cloud classification. Create detailed rules for user groups to comply with your company policies and block sites generating high traffic volume.

Trusted network detection

Lets you define trusted networks and protect all other connections with strict mode, making company laptops invisible on public Wi-Fi networks in hotels, airports and at conferences.

Two-way firewall

Prevents unauthorized access to company network and protects company data from exposure. Remote administration provides a firewall rule merge wizard that makes aggregating firewall rules in the network a snap.

Client antispam

Protects your company communications from spam and email-borne threats. Set white- and blacklists and self-learning separately for each client or group. The antispam natively supports Microsoft Outlook and also filters POP3, IMAP, MAPI and HTTP protocols.

Device control

Lets you block unauthorized media and devices based on pre-set rules and parameters. Set access permissions (read/write, read, block) for individual media, devices, users and groups.

Component-based installation

Install any or all of these security components: firewall, antispam, web control, device control, Microsoft NAP support, and web access protection. Saves disk space by only installing the modules you need. You can also remotely enable/disable installed modules.

Low system demands

Ensure proven detection while leaving more system resources for programs you use daily. Our software also runs smoothly on older hardware, saving you the time and costs of having to upgrade your endpoints.

Multiple log formats

Save logs in common formats — CSV, plain text, or Windows event log for immediate analysis or harvesting. Take advantage of data being readable by 3rd party SIEM tools; RSA enVision is supported directly via a plug-in.

REMOTE ADMINISTRATOR

Remote administration	Manage all servers, endpoints, and even smartphones and virtual machines from a single console. Support for IPv6 infrastructure makes management of network security even easier. The comprehensive console interface lets you view all security-related events, including logs from antivirus, firewall, web control, device control and others.
Real-time web dashboard	Access web-based dashboard from anywhere for quick at-a-glance security status using live streaming of data. Customize the information displayed on the dashboard to get the most up-to-date information on the security status from the server and clients.
Role-based management	Assign privileges to different remote administration users and delegate responsibilities accordingly. The built-in password strength checker and audit functionality ensure that administrator accounts are properly secured.
Dynamic client groups	Create dynamic and static client groups for easier policy enforcement and to address any pressing issues. Select from these parameters for groups: operating system, client name mask, IP mask, recent threat detected, and many more. Clients are moved automatically to the corresponding group if parameters change.
Event notifications	Specify log and report parameters or choose from more than 50 templates. Have notification sent immediately or in batches based on custom threshold for security-related events.
Randomized task execution	Minimizes AV storms on virtual endpoints and reduces resource contention on networked drives. Random task execution helps offset the effect of simultaneous system scans on network performance.
Local update server	Have all clients update from a local mirror server and minimize internet bandwidth usage. For your mobile workforce, define policies to update from ESET online servers when outside of home network. The local update server supports secured (HTTPS) communication channel.
Update rollback	Revert virus detection and module updates to a known good state in cases of system incompatibilities. Opt to freeze updates temporarily or until manually changed.
Postponed updates	Opt to download from 3 specialized update servers: pre-release (beta users), regular release (regular users) and postponed release (approx. 12 hours after regular release). Apply antivirus updates to non-critical systems first, followed by critical ones with the option of clearing the update cache.
Microsoft NAP support	Helps resolve compliance issues with company network access policy. You can set compliance requirements such as age of virus database, antivirus product version, protection status, availability of antivirus protection, as well as firewall status—and force database updates.
